

ACCESS

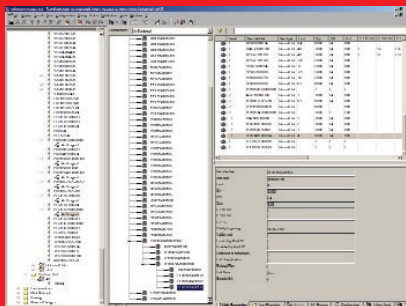

Look back with accuracy. Look ahead with intelligence.

ADVITIUM ACCESS

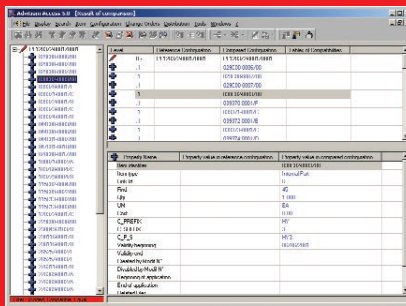

Advitium Access is a software-based solution that allows you to manage the processes associated with design, supply, production, and maintenance. Unlike most software solutions, Advitium has built-in application design capabilities that let you configure it for your own operations.

Traceability You get immediate adaptability to changes and updates, as well as the ability to look ahead and analyze the effects of those changes on other areas. The ability to perform an impact analysis, quickly and thoroughly, is a key decision-making tool.

Customer configurable Unlike some systems, which require esoteric and proprietary knowledge to make them work, Advitium Access is designed to be used – really used – by the end user. So, it's easy to make changes and evolve the system into what's best for your needs.

Compare across time and parts Get instant access to all information about parts over time, including specifications, design revisions, change authorizations, and (perhaps most important) how those incremental changes you made in the past affect the products you're making now.

WHAT IT DOES

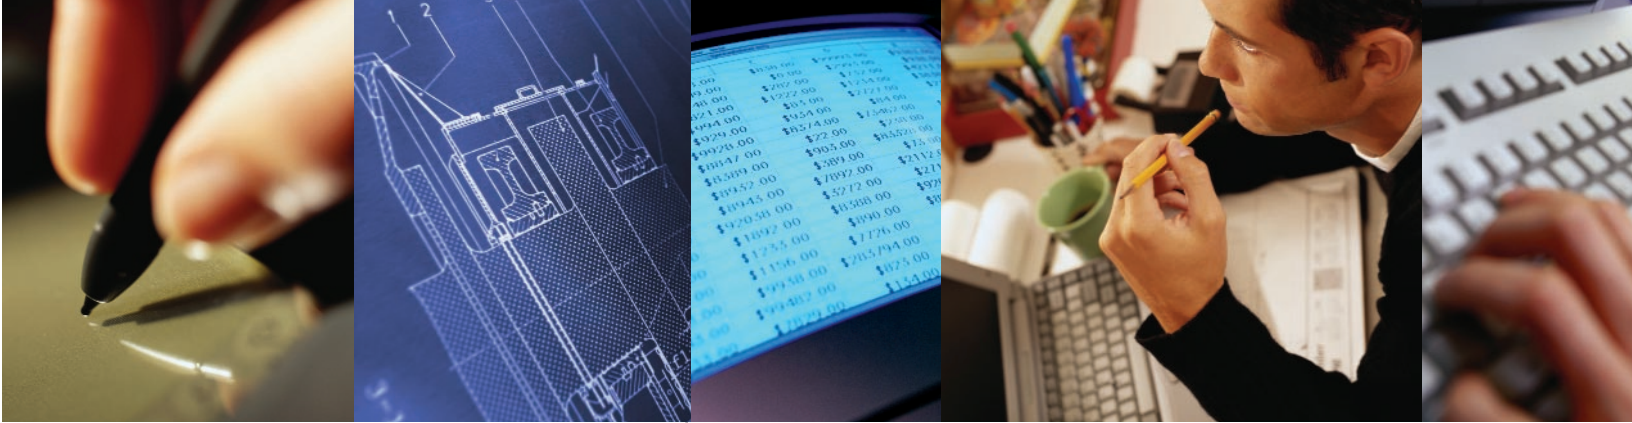

Advitium Access helps manage the information workflow related to your product, from managing configurations (including as-designed, as-installed, and as-maintained), to tracking documents and collaborative processes. Authorized personnel can view and edit this information online. Advitium Access is fully scalable, and can be used to manage anything from a single project to multiple facilities at multiple locations.

Advitium Access is part of an all-encompassing solution that includes Advitium Connect, which helps manage the information workflow related to collaborative processes.

HOW YOUR COMPANY BENEFITS

With Advitium Access, your company gets instant, real-time access to the latest design and supply information. This ensures compliance with ISO 9000 standards, and speeds the design and supply process. You gain a measurable competitive edge, by being able to move rapidly and adapt quickly.

ADVIUM ACCESS AND YOUR SUPPLY WORKFLOW

It's not just about shuffling data the way people used to shuffle paperwork, in an electronic version of an outdated business model. It's about managing your actual supply chain – the one that exists here in the real world. That means everything from managing parts and bills of materials, to keeping track of the latest changes (and how those changes affect other components).

- Manages part specifications
- Manages product configurations
- Manages bills of materials
- Tracks supply exchanges
- Creates, tracks and helps enforce schedules
- Increases efficiency

ADVIUM ACCESS AND YOUR DESIGN WORKFLOW

- Manages drawings and documentation
- Manages external system data
- Shows revisions immediately
- Provides impact analysis
- Speeds collaborative design efforts

ADVIUM ACCESS AND YOUR DOCUMENTATION WORKFLOW

- Generates customized reports
- Imports/exports data from/to any spreadsheet or database program
- Indexes, stores, and manages documents of all kinds, including CAD drawings (native files and their representation under TIFF and HPGL formats), spreadsheets, text documents (both entered and scanned), and PDFs
- Permits viewing of documents while tracking and authenticating users
- Tracks changes, revisions, and updates (and maintains history)
- Traces change orders and authorizations
- Distributes documentation based on established review processes
- Manages the flow of documentation for approvals
- Manages printing of all types of documents and groups of documents, through your existing network
- Handles product management to ISO 9000, ISO 10 007, RG 0040, and MIL SDT 973 standards

ADVIUM ACCESS IS UP AND RUNNING IN FIVE EASY STEPS

- 1 ----- On-site needs assessment to determine your business needs
- 2 ----- System set-up, including bulk load to database vault and analysis to ensure that every data point is unique
- 3 ----- Create, process, and develop user types and priorities
- 4 ----- Integrate with existing systems
- 5 ----- Train personnel
